

Abstract of the Disclosure

1
2 A fastener-driving tool assembly includes a fastener-driving member and
3 a coupling device. The fastener-driving member includes a first end and a second
4 end for driving a fastener. The first end of the fastener-driving member includes a
5 polygonal opening. The coupling device includes a first member and a second
6 member. The second member has a polygonal end securely engaged with the
7 polygonal opening of the fastener-driving member. The first member includes an
8 end for engaging with the other end of the second member. The other end of the
9 first member includes a polygonal engaging hole for engaging with one of an
10 extension rod, a handle, and a polygonal first end of a second member of a
11 similarly constructed coupling device.
